ALARM SETTING

The following parameters are programmable using the PC Configurator Software (model: R3CON).
■**ALARM TRIP POINT**
(-270.0 to +2400.0°C or -454 to +4352°F;
factory set to A1: 400.0°C, A2: 300.0°C, A3: 200.0°C,
A4: 100.0°C)
Four alarm setpoints are selectable per each input.
■**ALARM TYPE**
(High or Low; factory set to A1: High, A2: High, A3: Low,
A4: Low)
High or Low alarm is selectable for each alarm trip point.
High alarm: An alarm is set when the input signal goes above the setpoint.
Low alarm: An alarm is set when the input signal goes below the setpoint.
■**DEADBAND (HYSTERESIS)**
(0.0 to 900.0°C or 0 to 1620°F; factory set to 10.0°C or 100°F)

Deadband (deviation between the points where the alarm is set and reset) is selectable for each alarm trip point.
■**ALARM ON DELAY TIME**
(0.0 to 99.0 seconds; factory set to 1.0)
The alarm output is set when the preset time elapses after the input has entered in the alarm range.
This setting is common to all four points.
■**POWER ON DELAY TIME**
(0.0 to 99.0 sec.; factory set to 5.0)
The alarm output start functioning in the preset time after the power has been turned on.
This setting is common to all four points.
■**ALARM HOLD TIME**
(0.0 to 99.0 seconds; factory set to 1.0)
The alarm output is held for the preset time even if it is reset in shorter time.
This setting is common to all four points.

OUTPUT DATA DESCRIPTIONS

Four alarm setpoints are selectable per each input. One (1) word (16 bit) data is transmitterd to the PLC or the host device via the R3 network module.

SCHEMATIC CIRCUITRY & CONNECTION DIAGRAM

*For dual redundant communication.

• Unused Input Channels
Close across the unused input terminals as shown below.
(Choose K (CA) thermocouple for unused channels.)

Unused channels left open are equal to the burnout, which turns the red ERR LED on and sets a burnout flag at the PLC or the host device.
Shortcircuiting the terminals means approximate room temperature. An alarm setpoint must be set to a value that does not trip an unwanted alarm.
Unused channels can be specified and set so on the PC Configurator Software (model: R3CON) without needing to short at the field terminals.
